SNOW LINE TN TNX SNOW BLOWER

The two-stage snow blower is suitable for **removing snow** from sidewalks, parking lots, sports facilities, yards or roads.

The completely closed structure and the reinforced side panels allow to carry out road edge trimming operations.

Furthermore, the bolted and interchangeable cutting edge is made of HB 400; this guarantees a great resistance to wear and inevitably a lower maintenance cost.

The **sturdy structure** of the snow blower allows you to carry out **heavy snow clearing jobs**, also thanks to the **high productivity guaranteed by the powerful hydraulics**, especially in the TNX models intended for high hydraulic flow machines.

The attachment plate is bolted and interchangeable to

ensure a high versatility of the snow blower, which can be mounted and used on different operating machines with different attachments.

The chimney has a 270 ° hydraulic rotation and an angle adjustment of the deflectors, also hydraulic, to allow the operator to precisely direct the snow jet according to needs. Upon request, it is possible to order the extension of the chute (only for TNX models), to facilitate the loading of snow on the truck.

On request it is also possible to have the ± 10 ° hydraulic tilt adjustment, particularly useful for carrying out works where the road surface is not aligned, or if you are working on sidewalks.
